As of June 30, 2025 the Bank’s equity to total assets ratio increased to 17.04%, as compared to 16.57% for June 30, 2024.

Liquidity and Funding Sources

The Bank's Assets and Liabilities Committee (ALCO) is responsible for establishing policies relating to the management of the Bank's assets and liabilities. These policies aim to maintain interest rate, market, maturity, liquidity, and foreign exchange exposures within the Bank's approved limits while maximizing the return on shareholders' equity.

The Bank's asset and liability management policy ensures that sufficient liquidity is available to honor deposit withdrawals, meet payments upon the maturity of other liabilities, extend loans or other forms of credit, and address the Bank's working capital needs.

The Treasury department is responsible for managing the Bank's liquidity and funding positions as well as executing the Bank's investment strategy. The Bank's policies require high absolute levels of liquidity composed of high-quality liquid assets, a key pillar of the Bank's financial strategy.

Consistent with the Bank's conservative financial policies, it historically maintains high levels of liquidity in investment-grade liquid investments, which are complemented by: (i) an adequate asset and liability maturity structure, (ii) a diversified and stable deposit base, (iii) access to multiple sources of financing (representing 6.99% of total liabilities as of June 30, 2025); and (iv) low levels of short-term institutional liabilities, which together provide a stable asset and liability structure.

As of June 30, 2025, primary liquidity amounted to 28.20%, comprising cash, bank deposits and liquid investment-grade fixed-income investments, as a percentage of total deposits and borrowings (excluding perpetual bonds). The Bank's total primary liquidity has an average credit rating of AA-, with 62.7% of investments rated AA+ or higher and 79.9% rated A- or higher. These liquid assets represented 29.74% of total deposits and 20.81% of total assets.

In addition to our internal liquidity limits, the Bank must comply with liquidity ratios established by the SBP, which require banks to have liquid assets of no less than 30% of qualified deposits, with maturities of less than 186 days, excluding deposits from subsidiaries and pledged deposits. For the calculation of this ratio, the SBP allows for all loan installments and maturities classified as standard with a term of less than 186 days to be considered liquid assets. The loan installments and maturities can only represent up to 30% of the total liquid assets used in this ratio. As of June 30, 2025, the Bank maintained a regulatory liquidity of 34.46%.

A. Loan Portfolio

The Bank's loan portfolio is well-diversified among client segments and a wide variety of products. As of June 30, 2025, total gross loans amounted to US$13,013.1 million, comprising: (i) 53.9% retail loans (35.7% residential loans and 18.2% consumer loans), (ii) 42.4% corporate loans (28.8% local corporate loans and 13.6% foreign corporate loans), and (iii) 3.7% other loans (which include pledge loans, overdrafts, and financial leases).

To minimize the risk of credit losses, the Bank emphasizes granting loans secured by collateral, particularly single-family residences, other properties, and deposits, in addition to applying strict underwriting guidelines and "Know Your Customer" policies. As of June 30, 2025, 68.0% of all loans were secured: (i) 56.1% by first lien mortgages on land and improvements, and (ii) 11.9% by pledged deposits and other assets. The Bank's robust underwriting policies and security interests held as collateral have resulted in historically low gross and net write-off levels, averaging 0.53% and 0.16% of total loans, respectively, over the past two years ending June 30, 2025.

As of June 30, 2025, 85.0% of the Bank's loan portfolio consisted of local borrowers (individuals and corporations) based in Panama, while 15.0% consisted of regional clients based primarily in Costa Rica, Colombia, Guatemala, El Salvador, Peru, and Mexico, including clients of our universal banking subsidiary in Costa Rica, Banco General (Costa Rica), S.A., which operates 8 branches. Furthermore, 99.9% of the Bank's loans were denominated in US dollars, the legal tender in Panama.

Non Accrual Loans

Regulation issued by the SBP requires the classification of loans with a non accrual status if any of the following conditions exist: (i) principal and interest payments exceeding past due limits established by the SBP (91 days or more of past due for all types of loans, except for mortgage loans and overdrafts, which have limits of 121 and 31 days or more, respectively); or (ii) a deterioration in the debtor's financial condition that places the loan's collection at risk, such as reduced payment capacity, weakened collateral, or other adverse factors known to the Bank (e.g. fraud, death of the debtor, insolvency, or bankruptcy).

The following table presents non accrual loans according to loan type as of June 30, 2025, and 2024, and December 31, 2024, 2023, and 2022, respectively:

Allowance for Loan Losses

To maintain the allowance for loan losses at required levels, provisions for loan losses are accounted for as charges to income and added to the allowance and any subsequent write-offs are applied against this allowance.

The allowance for loan losses at amortized cost is determined based on expected credit losses (ECL), using the loans' credit risk rating and the mechanisms used to determine the loans' probability of default, depending on the impairment stage assigned to each loan. The ECL model is determined by grouping loans with similar credit risk characteristics, and segmented methodologies for "Consumer Banking" and "Corporate Banking". Both methodologies consist of probability of default, loss given default, and exposure to default estimates.

The ECL model classifies financial assets into three stages of impairment, applicable from the date of origination or acquisition:

Stage 1: The Bank recognizes a credit loss allowance at an amount equivalent to the expected credit losses for the following 12-months period. This represents the portion of lifetime expected credit losses resulting from default events that are possible within a 12-months period as of the reporting date, if credit risk has not increased significantly since initial recognition.

Stage 2: The Bank recognizes a credit loss allowance at an amount equal to the total lifetime expected credit losses (LTECL) for those financial assets which are considered to have experienced a significant increase in credit risk since their initial recognition. This requires the calculation of ECL based on the remaining lifetime probability of default (LTPD) of the asset. The allowance for credit losses is higher in this stage because of the increase in credit risk and the impact of a longer time horizon in comparison to stage 1.

Stage 3: The Bank recognizes a loss allowance at an amount equal to the expected credit loss over the total lifetime of the asset, based on a probability of default (PD) of 100% over the asset's recoverable cash flows.

The following table presents the breakdown of the allowance for loan losses under IFRS 9 parameters as of June 30, 2025 ,and December 31, 2024:

Stage 3 loan balance increased from US$264.2 million to US$306.6 million, as a result of a single loan backed by real estate collateral with a loan-to-value of 50.4%, and the allowance increased from US$55.3 million (20.94% of stage 3 loans) to US$68.9 million (22.48% of stage 3 loans).
